Blessing Adegbenle

Data Engineer, data pipelines for AI and analytics

adegbenleb@gmail.com | Bielefeld, Germany | linkedin.com/in/blessing-ayodeji | github.com/adegbenleb

Open to relocation within Germany | Available from 12/2026 | Portfolio: adegbenleb.github.io/portfolio

SUMMARY

Data Engineer with 4+ years of experience building the data foundations that AI and analytics depend on. Specializes in the data layer behind AI applications, bringing more than 500,000 products and 5.9 million attribute values from 15 manufacturers, distributors and retailers into one canonical model across PostgreSQL, Qdrant and Neo4j, with RAG pipelines and AI agents built with Agno on top. Experienced in turning messy enterprise data into trusted models, from SAP finance data in a Databricks Lakehouse to marketing and business data in Snowflake, using Azure Data Factory, Airflow and dbt. Builds data quality, lineage and access control into every pipeline, and works in an AI-native way with Claude Code every day, turning requirements from AI engineers and business teams into reliable, documented data products.

PROFESSIONAL EXPERIENCE

Data Engineer, Phaina

05/2026 – Present · Bielefeld, Germany

Phaina builds Argus, software for digital product advice on technical products.

- Built Python ingestion pipelines for more than 500,000 products and 5.9 million attribute values from 15 industrial manufacturers, distributors and retailers, mapping BMEcat XML, PIM exports, CSV and XLSX deliveries into one canonical model across PostgreSQL, Qdrant and Neo4j.
- Solved customer-specific data problems across very different product domains, including Excel-corrupted IDs and dates, internal PIM IDs used as SKUs, numeric values without units, separating parent, variant and accessory products, splitting value ranges into min and max features, and refreshing stale vector snapshots.
- Developed RAG pipelines for document ingestion, chunking, embedding refresh and Qdrant index updates, keeping knowledge bases current.
- Built and deployed AI agents and LLM workflows with Agno, with prompt engineering, context design and vector retrieval, traced and evaluated in LangSmith.
- Exposed data to AI agents and applications through GraphQL APIs, and validated incoming data with Pydantic data contracts and automated quality, consistency and freshness checks.
- Worked closely with AI engineers to align data formats, access patterns and requirements for inference and retrieval.

Data Engineer, Miele

08/2024 – 03/2026 · Remote, Germany

- Extracted SAP FI/CO data via OData services and BAPIs with Azure Data Factory, loading it into the Databricks Lakehouse for finance and operational reporting.
- Built batch ETL pipelines on Databricks with PySpark, cleaning and standardising data through bronze and silver layers in Delta Lake.
- Developed the gold layer as dbt models with dimensional modeling, slowly-changing dimensions and incremental loads, plus dbt tests and docs.
- Embedded data quality checks with Great Expectations, and lineage and access control with Unity Catalog.
- Delivered Power BI semantic models and dashboards with traceable KPIs for finance and business stakeholders.
- Automated testing and deployment with CI/CD and Terraform, and tuned Spark jobs for speed and cost.

Data Engineer, GI Group

07/2022 – 07/2024 · Bielefeld, Germany

- Built Python and SQL ETL pipelines orchestrated with Apache Airflow, using Git, code reviews and Docker.
- Modeled data in Snowflake with complex SQL, using PostgreSQL and MongoDB as source systems and DuckDB for local analysis.
- Loaded GA4 and Google Tag Manager data from its BigQuery export on Google Cloud into Snowflake, joining marketing data with CRM and business data.
- Implemented data validation and freshness monitoring, fixing root causes for good.
- Built Tableau reports and dashboards with stakeholders, turning requirements into trusted datasets.
- Tracked lineage from source systems to reports, with documented metadata and GDPR-compliant access control.

PROJECTS

Portfolio and AI Lab

10/2026 – Present

Personal project, live

This website. Every page is built from a few Markdown files that match my CV, and the same files feed an AI Lab that answers questions about my experience with retrieval-augmented generation.

ShopFlow: E-commerce Analytics Platform

10/2026 – Present

Personal learning project, ongoing

A learning project that builds a complete analytics platform on the public Olist dataset, almost 100,000 orders from a Brazilian marketplace.

AdhereAI: Health App for Patients with Non-Communicable Diseases

04/2026 – Present

Competition project, in development

AdhereAI is a health app that helps people with non-communicable diseases manage their treatment and recovery, connecting them with doctors, pharmacists, drug stores and ambulance services. I worked on the data engineering for data collection.

EDUCATION

- Master of Science (MSc) in Ecology, Universität Bielefeld, Bielefeld, Germany (04/2022 to 03/2026). Focus: Statistical data analysis, programming (R, Python) and quantitative methods.
- Bachelor of Science (BSc) in Forestry, Federal University of Agriculture, Nigeria (01/2014 to 06/2019). Relevant Courses: Data analysis, quantitative models, environmental statistics.

CERTIFICATES

- Microsoft Azure Data Engineer Associate
- Google Data Analytics Professional Certificate
- CompTIA A+

SKILLS

AI and LLM data	RAG, embeddings, vector search, LangGraph, LangChain, MCP, Claude Code
Programming	Python, R, SQL, PySpark
Databases	PostgreSQL (structured data), Qdrant (vector database), Neo4j (graph database), MongoDB, DuckDB
Data platforms and cloud	Databricks, BigQuery, Snowflake, Microsoft Fabric, Azure, AWS
Pipelines and modeling	Airflow, dbt, Kafka, REST and GraphQL APIs, SAP OData
Quality and DevOps	data contracts, data lineage, Git, GitHub Actions, Docker, Terraform
BI	Power BI, Tableau
Languages	English (fluent), German (B2)
